Source: Lipper and Octopus Investments. VCT performance is shown as a simple return comparison between the NAV at the beginning of the period and the NAV, plus any dividends paid out, at the end of the period. VCT share price performance shown includes reinvested dividends. NAV is stated after deduction of fees.

Key Risks

- Your capital is at risk and you may not get back the full amount invested.
- Tax treatment depends on individual circumstances and may be subject to change.
- Investments quoted on AIM are likely to fall and rise in value more than shares listed on the main market of the London Stock Exchange. They may also be harder to sell.
- The availability of tax reliefs also depends on the investee companies maintaining their qualifying status.
- Past performance is not a reliable indicator of future returns.

The Board has a policy of providing shareholders with a yield of 5% based on share price, subject to a minimum payment of 3.6p per share per year.

Glossary

Index	Net Asset Value (NAV)	Total Return (TR)
A representative portfolio of securities created to represent a particular market or a portion of it.	The price-per-share of a fund or other investment. The per-share amount of the fund is based on the total value of all the securities in its portfolio, any liabilities the fund has and the number of fund shares outstanding.	The gain or loss derived from an investment over a specified period of time. This figure includes interest, capital gains, dividends, and income distributions realised over that time period.

Monthly Commentary

The volatile equity market conditions experienced over the last few months continued into September. During August, the Net Asset Value (NAV) of the Octopus AIM VCT plc fell by 1.46%. This compares to an increase of 1.95% in the FTSE All-Share and a 0.33% increase in the FTSE AIM All-Share, all on a total return basis.

September is a busy period, with a number of the portfolio companies reporting results. Sosandar announced an upbeat AGM trading update confirming that sales were in line with expectations and had responded well to recent marketing activity. Telecommunications provider Gamma Communications plc reported earnings before interest, tax, depreciation, and amortisation of £30.4 million in interim results, which were well ahead of expectations. Profit has been driven by a shift to their higher margin cloud products and higher gross margin international business. This confidence led to broker forecast sales and earnings being upgraded for the next two years.

Detractors from performance over the month included Staffline Group plc, whose share price reacted poorly to the interim results released in September. The figures reflected the well-publicised problems the company has faced during the first half of the year, however the valuation does not reflect the true potential of the business once this year is behind them. We believe there is significant upside from current levels. Antibody developer and distributor Abcam plc was down on the month despite full-year results being in line with expectations. Strong performances in China and the US were offset by a weaker Japan. Although margins were down, the company is investing for future growth. An ambitious five-year plan targeting revenues of £450-500 million by 2024 from the £259.9 million reported for 2019 was announced. Next Fifteen Communications, the marketing specialist, saw its share price drift over the month ahead of interim results delivered in early October. While the shares reacted negatively on the morning of results, we subsequently had a reassuring update meeting with management.

Despite current market sentiment, we firmly believe that current valuations do not reflect the significant progress that our portfolio companies are making, and that this situation will reverse in time. The long-term case for smaller companies remains compelling.
